XXVI Geo 2di

JANUARY. I Month.

Then from their Dens the rav'nous Monſters creep,
Whilſt in their Folds the harmleſs Beſtial ſleep.
The furious Lion roams in queſt of Prey,
To gorge his Hunger till the Dawn of Day;
His hideous Roar with Terror ſhakes the Wood,
As from his Maker's Hand he aſks his Food.
Again the Sun his Morning Beams diſplays,
And fires the eaſtern Mountain with his Rays.

THE Greatneſs of that Power, which has been exerted in the Creation, though every Object in Nature ſhews it, will beſt appear by conſidering a little the GREAT Works, properly ſo called, of Nature; the Sun, and Planets, and the fixed Stars. The Sun and Moon, the moſt conſpicuous to us of all the celeſtial Bodies, are the only ones mentioned in the ſacred Text: But the Invention of that nobleſt of Inſtruments the Teleſcope, and the Sagacity of the Aſtronomers of later Ages, whoſe Obſervations have improved and corrected thoſe of the foregoing, afford us a very different Idea of the Solar Syſtem, from what the ſingle Conſideration of thoſe two moſt conſpicuous Bodies gives us. As this may probably fall into the Hands of ſome, who have not Leiſure or Opportunities of reading Books of Aſtronomy, the following brief View of our Syſtem, and of the Immenſity of the Creation, according to the Theory of the Moderns, may not be unacceptable.

It is proper, in the firſt Place, juſt to mention, That the real Magnitudes, Diſtances, Orbits, and other Affections of the Bodies of our Syſtem are determined by what Aſtronomers call their Parallaxes, and by their Elongations from the Sun, and their apparent Magnitudes, and other analogical Methods, which would take up by far too much Time to explain here; by which it is poſſible to deter-

mine
